

Home Page:

Adult Family Home Services assists you through the difficult process of placing yourself or your loved one in the appropriate Adult Family Home. A skilled Registered Nurse will conduct a medical assessment of the client as required by the Washington Aging and Adult Services Administration. This includes gathering medical and personal information about the clients likes and dislikes and past history.

Next, an AFHS Placement Specialist will work with the client and family to select the right home based on the nurse's assessment and client needs.

The Adult Family Home then does preliminary care planning based on the nurses's assessment

If needed, the nurse then does a "Delegation" which consists of traning the Adult Family Home's caregivers in skills the client may require such as medication administration, catheter care, feeding tube care, etc.
